Title

Authors

Description of the problem

A brief description of the problem and its context (industry, environment, etc.).
Who can benefit from this model and how?
Why does the problem seem interesting to you?

Data

Data sources, assessment of their credibility.
Brief descriptive analysis of the data.
Rationale: How can this data help solve the problem?

A way to solve the problem

A brief description of the selected model with justification.
Stages of project implementation.
Evaluation measures (quality assessment) of the model.

Discussion of the results and evaluation of the model

Modeling results
Model evaluation

Summary

What worked?

What were the problems? How did you solve them?

How can the project be used/developed in the future?

etc.
